# Irish Medtech Association

**ibec**

Ireland a global hub for Medtech  
Sector employs over 40,000 people  
14 of the world's top 15 medical technology  
companies have a base in Ireland.

One of the top 5 global medtech hubs competing with the  
likes of Massachusetts, Minnesota and California in the USA

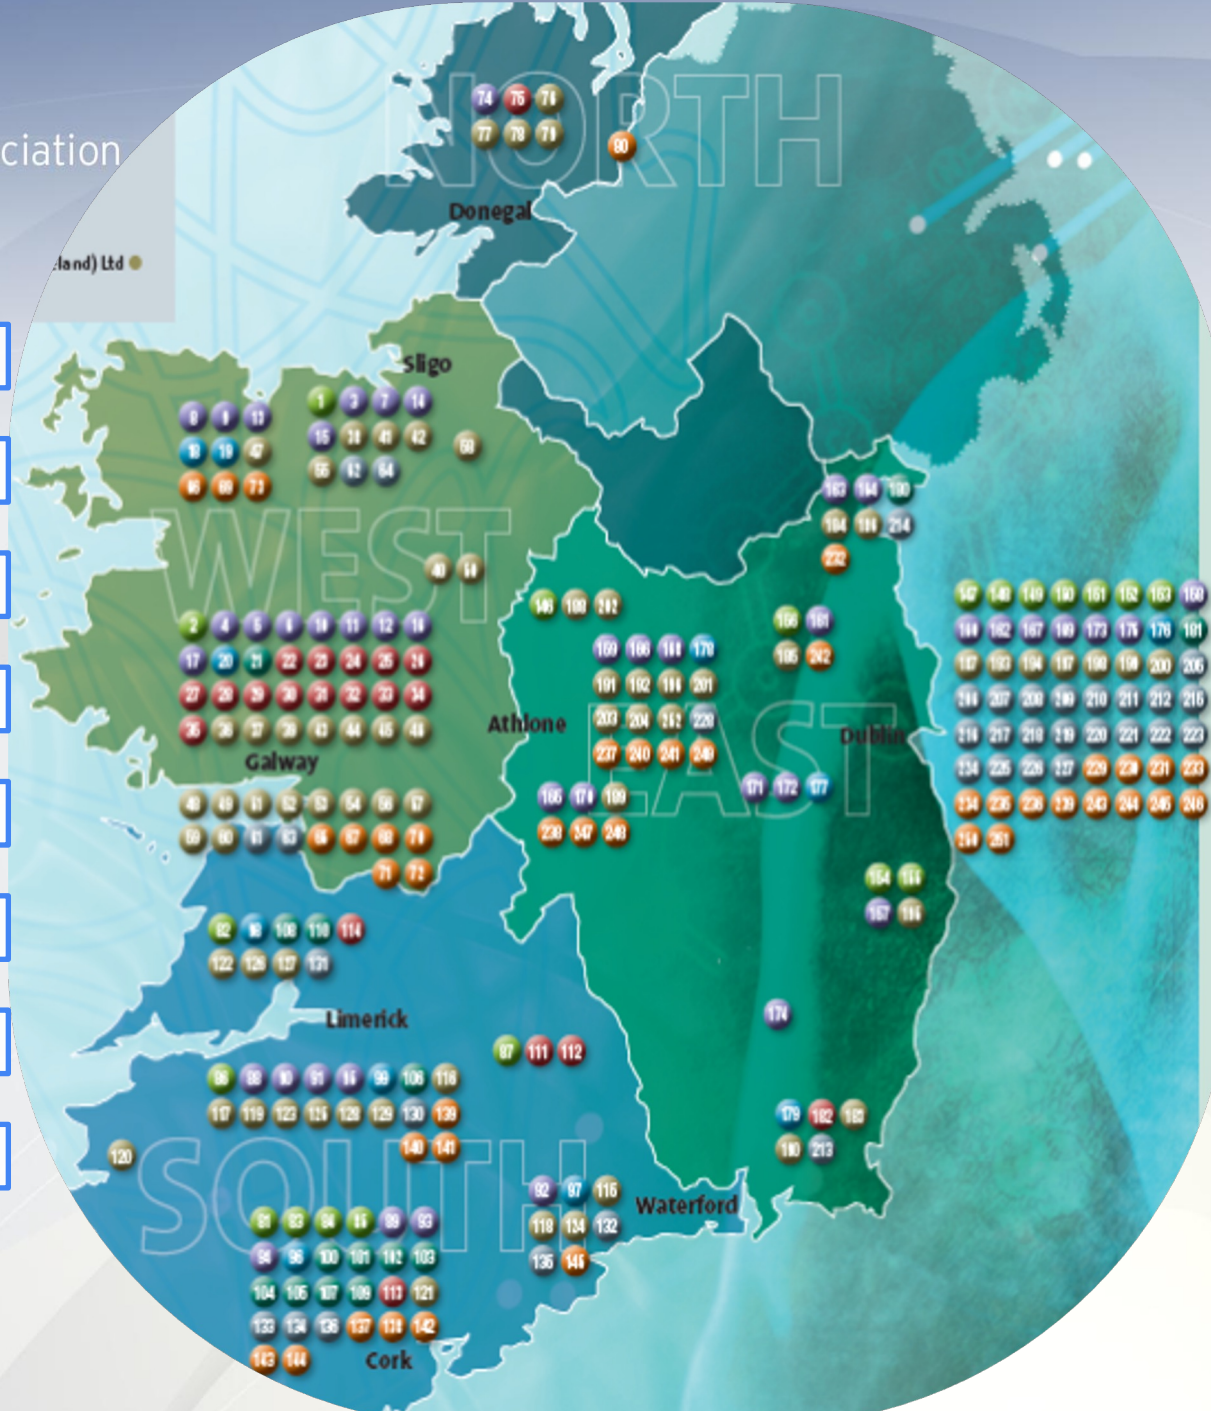

Medtech is a driver of regional growth with major clusters  
in Galway, Limerick, Cork, Waterford, Sligo and Dublin

service

# Ireland continues to be a leading global hub for medtech

1st

Ireland is the no. 1 exporter of contact lenses from the EU and globally.

1st

Ireland is the no. 1 exporter of stents in the EU and globally.

2nd

Ireland is the 2nd largest exporter of medtech in Europe.

4th

Ireland is the 4th largest exporter of artificial joints in the EU.

4th

Ireland is the 4th largest exporter of diagnostic reagents from the EU.

14th

14 of the world's global 15 medtech companies are in Ireland.

450

42,000 directly employed in medtech across 450 companies making it the largest employer of medtech professionals in Europe, per capita.

12BN

Annual exports of c.€12.6 billion.

75%

75% of global medtech companies with operations in Ireland are carrying out R&D.

# Defining Ireland's medical technology sector

Medical technology companies are defined as companies that:

- Design and/or manufacture medtech products and/or solutions, including software and hardware for healthtech.
- Manage significant international shared services from Ireland.
- Directly service the medtech sector.

The sector is diverse, and the following seven broad categories have been established to describe and the sector in Ireland:

## 1. Diagnostic

Devices or software used to identify a disease, condition, or injury.

## 2. Ophthalmic

Diagnosis and treatment of conditions relating to the eye.

## 3. Vascular/ Endovascular

Relating to the treatment of vascular disease.

## 4. Orthopaedic

Relating to the treatment of musculoskeletal system including muscles, bones, joints, ligaments, and tendons.

## 5. Hospital/ Homecare

Other segments of the market not captured here such as respiratory, surgical devices, minimally invasive devices and so forth.

## 6. Neurology

Concerning disorders and diseases of the nervous system including the brain and spinal cord, peripheral nerves and muscles.

## 7. Service

Outsourced function to a third party such as product development, design, manufacturer and generation of intellectual property.

# Defining Ireland's digital healthtech sector

The digital healthtech sector in Ireland is diverse and the following nine broad headings have been established to describe and categorise the sector in Ireland. These categories broadly reflect solution types to offer a consistent view of digital health activity in Ireland.

## 1. Connected medical devices

Wearable and wireless medical devices; software driven diagnostic products; therapy delivery devices; biometric sensors.

## 2. Digital therapeutics

Software driven therapeutics.

## 3. Mobile health (mHealth) and wellness

Wellness, fitness trackers, nutrition and lifestyle apps; virtual health assistants; healthcare coaching.

## 4. Personalised healthcare

Precision medicine; personalised support, symptom management and interventions; Clinical decision support solutions.

## 5. Remote patient monitoring & telehealth

Remote patient monitoring solutions; medication adherence tools; telemedicine virtual visits and remote care programmes.

## 6. Health Information Technology (HIT)

Electronic medical record systems; electronic prescribing and order entry systems; consumer health IT applications

## 7. Connected care management

Care management platforms, staffing, and financial management solutions.

## 8. Data, analytics and cyber security

Patient data hosting; encryption and cyber security; AI and predictive analytics; digital biomarkers.

## 9. Technology solutions and infrastructure

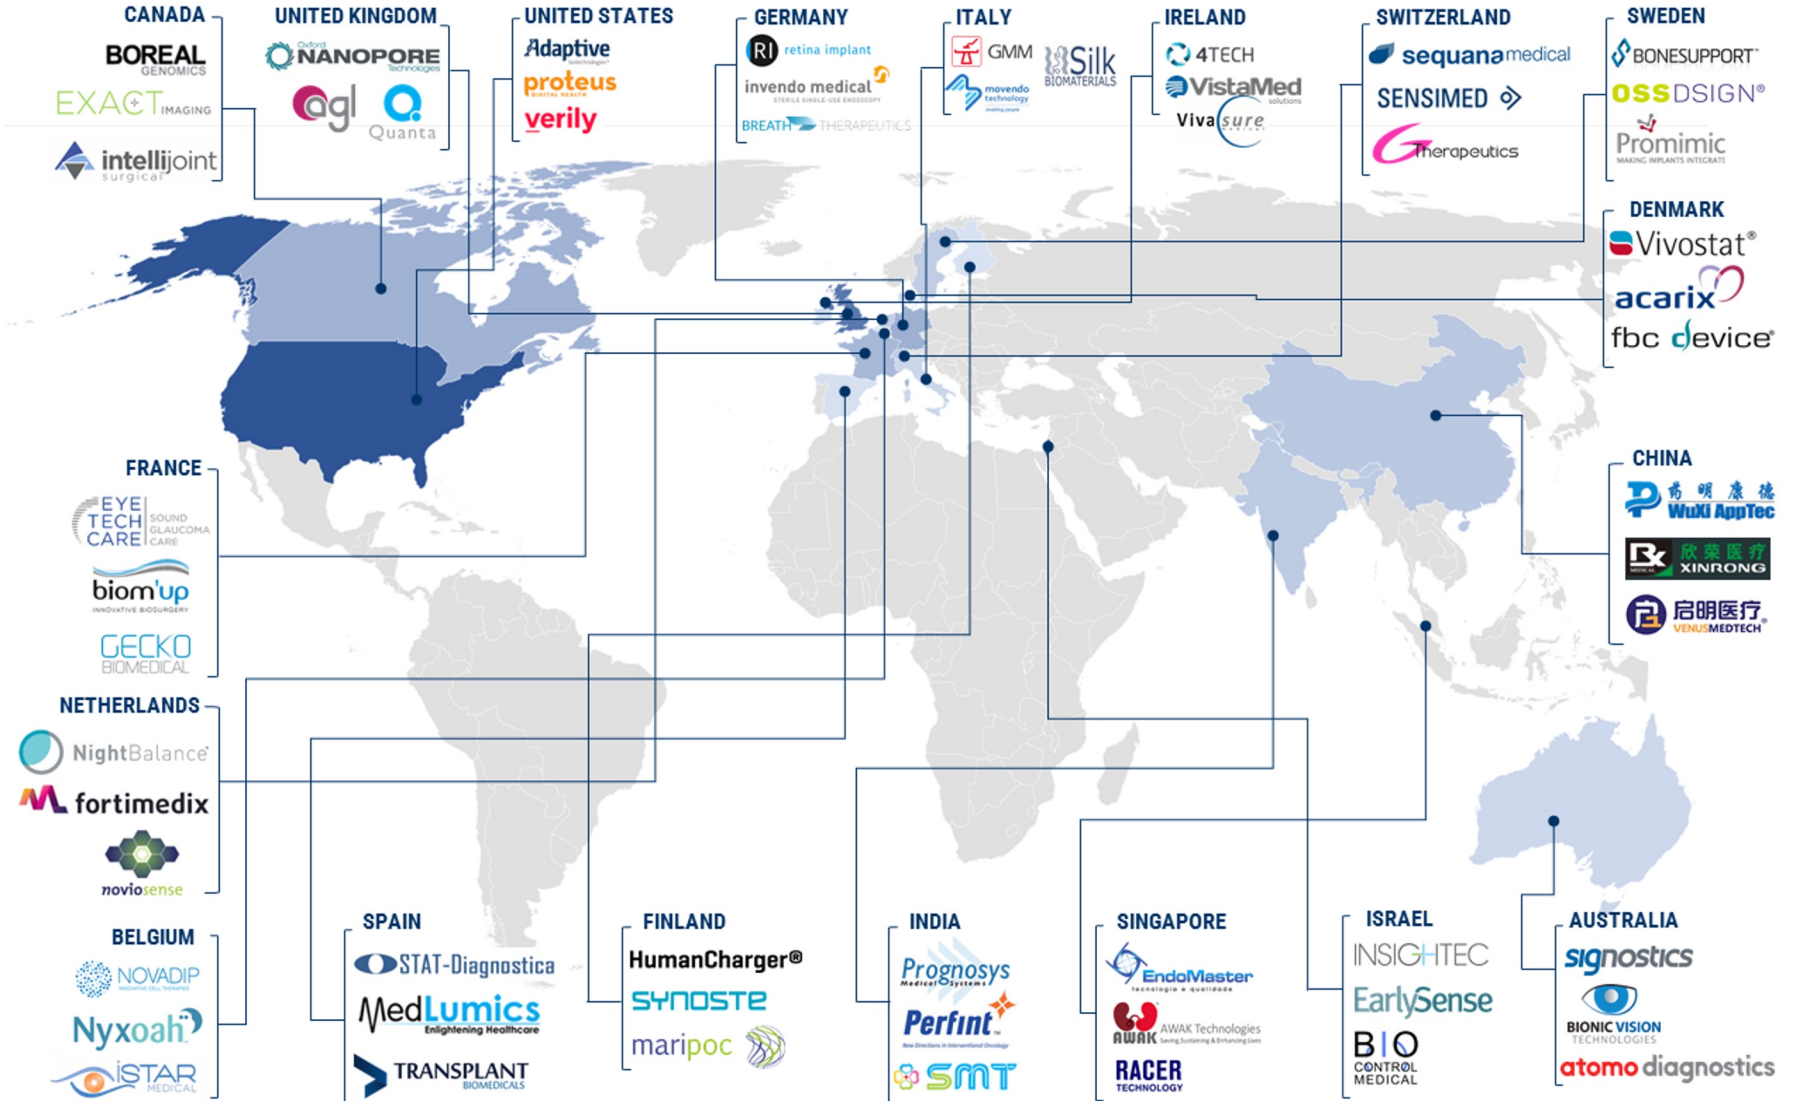

ICT services and infrastructure; IoT solutions.

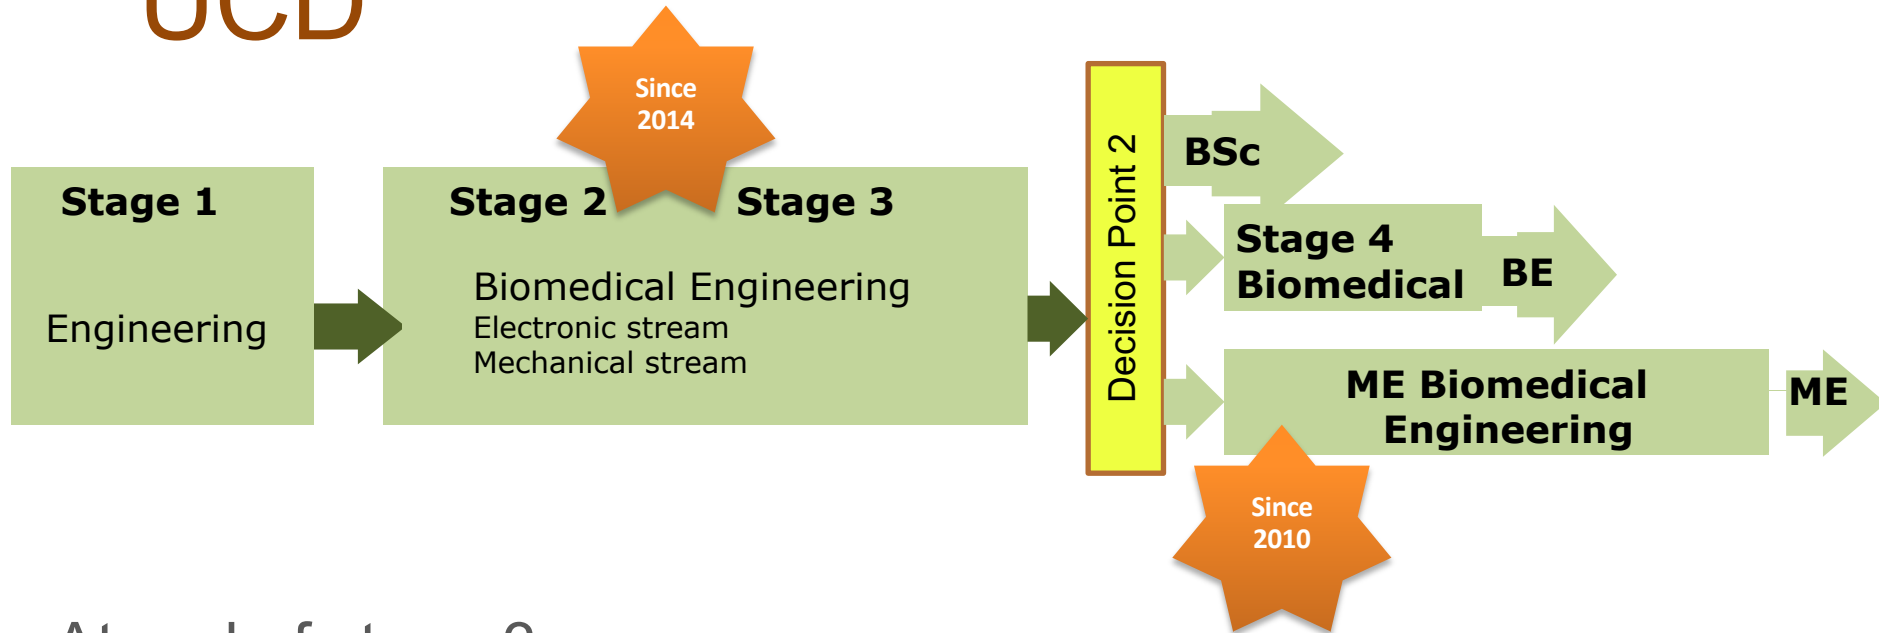

# MOST WELL-FUNDED MEDICAL DEVICE COMPANIES ACROSS THE GLOBE

As of 5/4/17

# Biomedical Engineering Paths at UCD

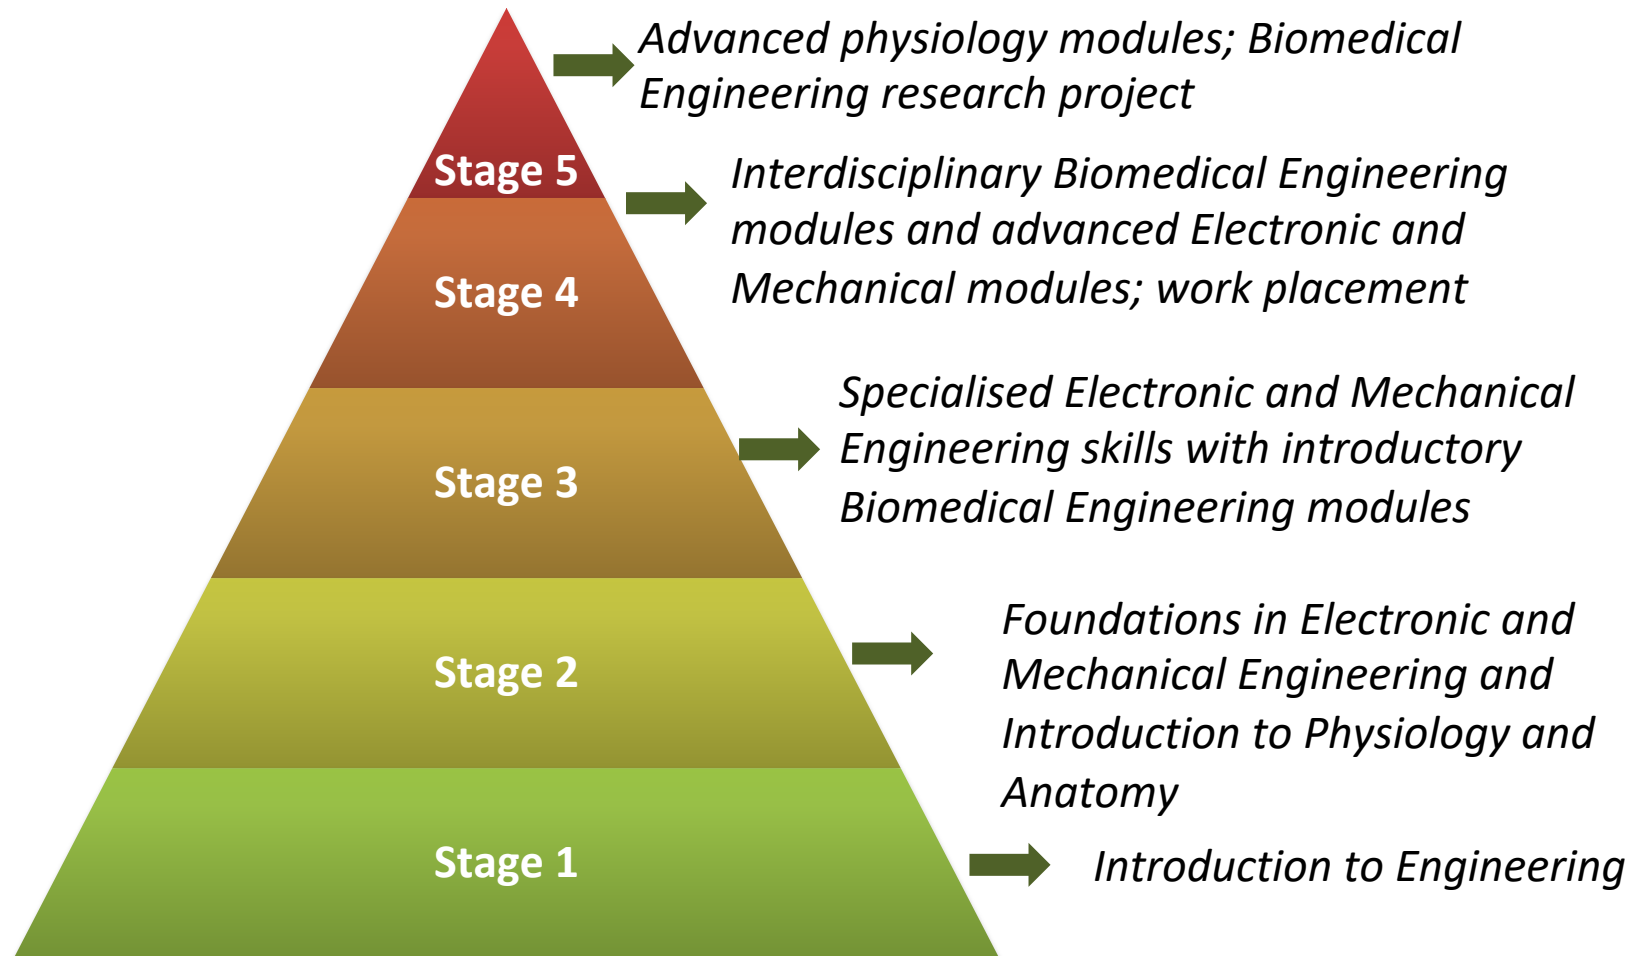

At end of stage 3:

- graduate with BSc (Engineering Science)
- progress to stage 4 of BE in Biomedical Engineering

Or, if eligible (weighted GPA  $\geq 2.8$ ):

- enter ME programme in Biomedical Engineering

# UCD Biomedical Engineering Programmes

## ME Biomedical Engineering

2 Year degree

120 Credit

GPA greater than 2.8 in Biomedical/Electronic/ Electrical or Mechanical Eng.

Accredited by Engineers Ireland

6-8 Month Professional Work Experience and 25 credit project

### Sample modules:

Neural Engineering

Rehabilitation Engineering

Machine Learning For Engineers

Biosensors & Actuators

Biomechanics & Mechanobiology

Cell Culture & Tissue Eng

Medical Sciences for Biomedical Engineers

Biomechanics

Biomaterials

Medical Device Design

Experimental design and statistics

Bioinformatics

Regulatory Affairs in Science

# ME Biomedical Engineering Year 1

Semester 2 : 30-Credit Professional Work Placement

January – August

Helping all people live healthy lives

UNSW THE UNIVERSITY OF NEW SOUTH WALES SYDNEY • AUSTRALIA

*'Also, just a note that we were blown away by the quality of the applications from UCD this year - it was very tough choosing between them at both interview and offer stages. The UCD students really stand out from the other candidates (and we had applicants from all over Ireland and around Europe).'*

## Shimmer Technologies

*'It's rarely I feel the need to go into writing on feedback directly to Universities in relation to student placements we receive here in Boston Scientific, in fact this will be the first time. However, in the case of your Masters students who have just finished placements with us here in the past few weeks..., I feel the need to specifically highlight that these students were of a stand-out nature and not only developed considerably themselves during their placements, but contributed very well to our business – in fact to the extent that they will leave a vacuum behind them now that they have returned to college...As is the case with students of the standard, they are fast learners, very intelligent, constantly ask the right questions and always bring new perspectives. In addition to this, however, what really made these students stand-out for me was their level of enthusiasm, engagement, perseverance, thoroughness, ability to integrate within the team and their strong work ethic.'*

## Boston Scientific

# Sample ME Projects

- Finding the correct model for sensory-motor translations in the brain
- Crush strength testing of mussel shells considering fish jaw anatomy
- Probing the brain mechanisms of multisensory detection
- Deep brain stimulation of axons and branching collaterals
- Computational modelling of directional electrodes for deep brain stimulation
- The Three Dimensional Soldering of an Implantable Heart Sensor for a Closed Loop Circuit
- Adhesive patch for an on-body injector device.
- Achilles tendon – its age-related changes and potential clinical utility in men
- How do the zones of articular cartilage emerge over postnatal development?
- One- and few-shot learning with deep neural networks for medical image analysis
- Can decision neuroscience help to make our roads safer?
- Simulation of unprotected Vs protected head impact events during professional rugby tackles.
- A continuous measure of decision processing to monitor changes of mind
- Design of a device to measure oropharyngeal force: tongue protrusion.
- Does a Mobile bearing Polyethylene spacer really matter in Total Ankle Replacement?
- EEG signals of sensorimotor decision formation under varying neuromuscular demands
- Identification of novel speech-biomarkers in Huntington's disease
- Can sutures share the load?
- How do the mechanical properties of the meniscus develop over time?
- Longitudinal analysis of sleep and physical activity in Huntington's disease.
- Characterisation of biomaterials to understand their influence on organ-on-a-chip devices.
- Design and development of an organ-on-chip model of pancreatic cancer metastasis
- Design of scale up microfluidic chips for the synthesis of polymer nanoparticles
- Computational Medical Imaging: Analysis of multimodal brain MRI data sets in type I & II diabetes
- EEG signals of sensorimotor decision formation in the learning of complex myoelectric control
- Sense of agency for myoelectric control
- Does finger pad skin slip inform grip force control?
- Assessing new methods for separating sensory, cognitive and motor processes in EEG
- Biomechanical Considerations of Menstrual Cups
- Biomechanics & pathophysiology of traumatic spinal cord injury
- Instrumented pedals for rehabilitation robotics and athletic training
- Predictive modelling of lower-limb cycling rehabilitation
- Optimisation of the External Cable Assembly for ProVerum Medical Minimally Invasive Expander Imaging and Delivery System in the Treatment of Benign Prostatic Hyperplasia
- Design of a novel growth tethering device for treating limb deformities in children
- Non-invasive Ultrasound Thrombus Disruption
- Motor unit coherence in Type 1 diabetes
- Using AI in predictive simulations of gait

# UCD Engineering for World Health

## UCD Engineering World Health

Home / Study / Student Blogs / UCD Engineering World Health

Engineering World Health (EWH) is a non-profit organisation that aims to work with communities in developing nations to repair hospital equipment and to educate local workers about equipment maintenance. EWH is made up of more than 20 university chapters across the world. Chapters engage in focused student-led research and activities, which includes design competitions, and outreach to schools in their home countries. There are also annual EWH Summer Institutes that train interested chapter members and place them in developing countries for several months to work in local hospitals and healthcare settings repairing equipment.

UCD's EWH chapter was established in late 2019. Riding roughshod over rolling covid restrictions using Zoom calls, the chapter grew its membership throughout the 2019-2020 academic year and is still going strong.

In this first year, led by an all female executive committee, the chapter took 3rd place in the EWH Design Competition. Under new leadership since the start of the 2020-2021 academic year, the chapter has gone on to win EWH Chapter Of The Year twice, in both 2020-2021 and 2021-2022 academic years, and also scooped 2nd and 3rd places in the EWH Design Competitions in respective years.

The UCD EWH chapter engages in a range of activities, which are typically organised by subcommittees. These include activities such as an outreach programme which involves creating STEM-themed challenges for schools and youth clubs, running these challenges, and giving talks on engineering to pre-college students; the EWH UCD Design Competition Team; the social committee; and the fundraising committee.

The UCD EWH chapter is always looking for new members to join. If you're interested and would like some more information, you can check out some of the social media links below, or reach out by email to [ewh@ucd.ie](mailto:ewh@ucd.ie). Members from all disciplines are welcome, not just engineers!
