Notes: Derived from survey Qh13 I know it is sometimes hard to give an exact figure for income, but could you please think about your household's take home income in the last 12 months. Over this time, what is your best guess of the household's average total income per *week*, this is the take-home family *weekly* income from all sources and includes social benefits for all people living in your household? This includes wages and salaries, income from self-employment, dividends and interest, unemployment insurance or the dole, worker's compensation, government pension, child benefit, child support, and all other sources. Please use Card 33 to choose the weekly income range that best applies to your household.
